

Innovac23

- Event Idea

Since it is a technical club we should more focus on technical fields. How about conducting a kind of event where we can learn about humanoid AI robots like "Sophia". I think every developer wants to know how they work? What mechanism they use? What is the possibility of people to come? Maybe 3/4 & 1/4 for those who don't have interest in tech field. For making an event a success it is necessary to have kind of innovative idea that never had been done or the idea which will attract more people to build interest in tech field. After that we can conduct some high tech test related to that also

- Vision

Learning & developing purpose for those areas that are interesting but just thinking about those fields brings more questions in mind about their working

- Venue

Since without electricity nothing can be done so the venue should be like that has switches to charge electronics like laptop.

I'm not very much familiar with Halls, but Barn Hall is quite big so it should be enough.

- Budget

Approximate budget may be 1lakh if we call a person who's experience in that field someone like professor

It also involves refreshment, poster, banner

- People Needed

20-30 people

- Publicity

1. Front of a clock tower a big poster or something creative to attract.

2. Instagram

3. Pasting posters separately in every Hostel notice board & mess.

4. How about hacking computer system of campus for 15-30 sec to publicity since most of tech. student uses campus system.
